PROJECT TITLE

Employee Performance Analysis using Excel

AGENDA

1. Problem Statement
2. Project Overview
3. End Users
4. Our Solution and Proposition
5. Dataset Description
6. Modelling Approach
7. Results and Discussion
8. Conclusion

PROBLEM STATEMENT

"Analyze the employee dataset to identify key factors driving performance, job satisfaction, and turnover rates at Naan Muthalvan. Develop data-driven insights to enhance employee engagement, retention, and talent development. Specifically, investigate the impact of demographics, performance metrics, and training programs on employee outcomes. This analysis will inform strategic HR decisions to drive business growth and success."

PROJECT OVERVIEW

- Identify key drivers of employee performance and job satisfaction.
- Analyze factors contributing to turnover and develop strategies for retention.
- Inform talent development programs and optimize HR initiatives.

WHO ARE THE END USERS?

Employers are the end user.

OUR SOLUTION AND ITS VALUE PROPOSITION

Solution:

1. Data Analysis: Analyze the employee dataset to identify trends, patterns, and correlations.
2. Predictive Modeling: Develop predictive models to forecast employee turnover, performance, and job satisfaction.
3. Data Visualization: Create interactive dashboards to visualize key findings and insights.
4. Recommendations: Provide actionable recommendations for HR initiatives, talent development programs, and employee engagement strategies

Objective: Enhance employee engagement, retention, and performance through data-driven insights and recommendation

Dataset Description

Description: A comprehensive dataset containing demographic, professional, and performance-related information about employees.

Attributes:

- Employee ID
- Name
- Department
- Job role
- Manager ID
- Date of joining
- Tenure
- Age
- Gender
- Education
- Skills
- Performance ratings
- Training and development
- Job satisfaction
- Engagement level
